Grants

IS MY BUSINESS ELIGIBLE FOR A GOVERNMENT GRANT?

BUSINESS GRANTS ARE ALWAYS CHANGING

The best way to find out whether your business could get a government grant for EV chargers is to get in touch with us.

Grants and guidelines change regularly, so it's best to speak with the experts at Charge & Recharge!

WE ARE AN OLEV APPROVED COMPANY

Only chargers installed by Office for Low Emission Vehicles (OLEV) approved installers are applicable for a grant.

Choose Your Charger

Project EV 20KW Rapid Charger

A three-phase commercial unit with a single CCS gun. Perfect for small-scale commercial charging due to its high power.

Hypervolt 7kW Charger

Hypervolt chargers don't require an Earth Rod upon installation and they are optimised for solar charging. Option of type 1 & 2 extension leads.

Easee Charge Wall-Mounted Charger 7KW

A socket-only 7.2KW charger with smart app capabilities. A cost-effective charger with a sleek design.

Choose Your Charger

GARO LS4 Dual Charger 22KW

A standalone tower charger for commercial use. Aluminium marine-grade build quality so it is made to last. Easy to use with remote management of up to 32 devices.

GARO GTB 22KW Charger

Wall mounted commercial charger with LED indication. Can be built as a system of up to 25 chargers with dynamic load management.

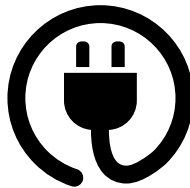

We can also fit a charger that is not on this list, including non-OLEV approved chargers. Contact us directly to discuss your options further.

WHICH CHARGER IS RIGHT FOR MY BUSINESS PREMISES?

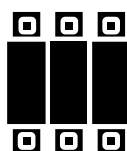

POWER

Does your premises have single or three phase power? Usually, the bigger the building, the more likely you are to have three phase power. This makes 22kW chargers a more suitable charger for the premises due to their quick charge functions.

SPACE

As part of the on-site consultation, we will carry out a visual inspection to ensure you have the adequate power in your distribution board to accommodate your new chargers.

Are you looking for a commercial or industrial electrician?
